Grade	**46.00** out of 50.00 (**92%**)

Question 1
Correct
Mark 4.00 out of 4.00

Which CSS property controls the vertical spacing between lines of text?

- line-height ✓
- text-indent
- letter-spacing
- font-size

The correct answer is: line-height

Question 2
Correct
Mark 4.00 out of 4.00

Why might a developer use shorthand properties in CSS?

- They make the code more concise and easier to manage ✓
- They are required for all responsive layouts and mobile-first design
- They increase the specificity of the rule for overriding browser defaults
- They prevent the use of external stylesheets for global styling

The correct answer is: They make the code more concise and easier to manage

Question 3
Correct
Mark 5.00 out of 5.00

What does a property-value pair in CSS do?

- It creates a new HTML element based on the property name
- It links external files to the HTML document for styling
- It only affects the code in the editor, not the web page appearance
- It tells the browser which trait to change and how to change it for the selected element ✓

The correct answer is: It tells the browser which trait to change and how to change it for the selected element

Question 4
Incorrect
Mark 0.00 out of 4.00

What does the CSS clamp() function do for font sizing?

- It sets a minimum, preferred, and maximum size
- It automatically bolds and italicizes text for better emphasis
- It locks the font size to a fixed value, preventing resizing on mobile devices ✗
- It combines multiple font families into a single custom typeface

The correct answer is: It sets a minimum, preferred, and maximum size

Question 5
Correct
Mark 4.00 out of 4.00

What is the cascade in CSS?

- A method for grouping related CSS properties into one block for easier reading
- The process by which the browser decides which style rule applies when multiple rules target the same element ✓
- The order in which HTML elements are loaded on the web page
- A technique for resetting browser defaults to ensure consistent layouts

The correct answer is: The process by which the browser decides which style rule applies when multiple rules target the same element

Question 6
Correct
Mark 4.00 out of 4.00

What does the !important flag do in a CSS rule?

- It disables external stylesheets for the page
- It is required for all responsive design breakpoints
- It increases the file size and slows down page loading
- It overrides all other declarations for that property ✓

The correct answer is: It overrides all other declarations for that property

Question 7
Correct
Mark 5.00 out of 5.00

Why is it best practice to use a font stack (e.g., Helvetica, Arial, sans-serif) in CSS?

- It forces browsers to download new fonts every time the page loads, increasing variety
- It ensures a similar font is used if the first choice is unavailable ✓
- It makes the code shorter and easier to read for developers and browsers
- It is required for all headings but not for body text or navigation links

The correct answer is: It ensures a similar font is used if the first choice is unavailable

Question 8
Correct
Mark 4.00 out of 4.00

Which selector would style every element on the page?

- * ✓
- all
- body

The correct answer is: *

Question 9
Correct
Mark 4.00 out of 4.00

Which property would you use to indent the first line of a paragraph?

- text-indent ✓
- word-spacing
- text-transform
- font-style

The correct answer is: text-indent

Question 10
Correct
Mark 4.00 out of 4.00

What is the main purpose of CSS in web development?

- It manages server-side logic and database connections for dynamic websites
- It structures the content of a page, dividing it into sections and forms for user input
- It controls the appearance and layout of HTML elements ✓
- It validates HTML code and prevents errors in browser rendering

The correct answer is: It controls the appearance and layout of HTML elements

Question 11
Correct
Mark 4.00 out of 4.00

Why is selector specificity important in CSS?

- It increases the font size of headings and paragraphs automatically to match industry standards
- It is only relevant for inline styles and not for classes or IDs
- It determines which rule wins when multiple rules target the same element ✓
- It prevents the use of external stylesheets for global design

The correct answer is: It determines which rule wins when multiple rules target the same element

Question 12
Correct
Mark 4.00 out of 4.00

What is the main benefit of using an external stylesheet?

- It forces all styles to be inline for better performance
- It allows multiple pages to share the same styles and makes site-wide updates easier ✓
- It disables browser default styles and resets all elements to zero
- It eliminates the need for semantic HTML structure in the document

The correct answer is: It allows multiple pages to share the same styles and makes site-wide updates easier
